SUMMARY

Cybersecurity Graduate Student with hands-on experience in threat detection, vulnerability assessment, and security automation. Skilled in Python scripting, containerized lab environments, and mapping risks to frameworks like MITRE ATT&CK. Proven track record of automating security workflows, analyzing complex attack vectors, and communicating technical findings through structured remediation reports.

EDUCATION

Master of Science in Cybersecurity
University of Houston- Houston, Texas
GPA: 4.0/4.0

Expected May 2027

Bachelor of Technology in Cybersecurity
Shah & Anchor Kutchhi Engineering College - Mumbai, India
GPA: 8.2/10

June 2025

TECHNICAL SKILLS

Security Operations: SIEM Monitoring, Wazuh, alert triage, phishing analysis, incident response

Network Analysis: Packet inspection, traffic analysis, Security Onion

Tools: Nmap, Burp Suite, Metasploit, Wireshark

OT/ICS Protocols: Modbus/TCP, PLC Address Mapping, IPv4/IPv6 Subnetting

Automation/Programming: Python, Docker, n8n

WORK EXPERIENCE

Cyber Intelligence Intern

June 2024 - December 2024

DeepCytes Ventures Pvt. Ltd., Mumbai, India

- Engineered and optimized custom Python automation scripts to integrate open-source security tools into the core SaaS platform, increasing vulnerability scanning throughput.
- Updated and standardized automated testing workflows to align with company-specific vulnerability assessment methodologies and compliance rules.
- Generated comprehensive vulnerability documentation and structured remediation reports to assist engineering teams in tracking and patching high-risk findings.

Technical Support Engineer Intern

December 2023 - January 2024

Network TechLab Pvt. Ltd., Mumbai, India

- Monitored centralized SIEM dashboards and successfully triaged 20+ daily security alerts across diverse enterprise client environments.
- Mapped triggered security alerts to specific MITRE ATT&CK adversary techniques to accelerate threat escalation and incident containment.
- Served as the primary technical point of contact for clients during initial threat detection, delivering clear incident notifications and diagnostic data.

Research Intern

January 2023 - April 2023

Shah and Anchor Kutchhi Engineering College, Mumbai, India

- Conducted research on Onion Router (Tor) networks to track and document illicit marketplaces.
- Compiled reports detailing the structure and risks associated with Deep Web ecosystems.

TECHNICAL PROJECTS

Automated AI SOC Agent

Personal Project

- Built and deployed an autonomous SOC alert-triage pipeline integrating a self-hosted Wazuh SIEM, n8n orchestration, and a Gemini-based AI agent that independently selects and calls VirusTotal and SIEM-query tools to investigate real security alerts end-to-end, unattended.
- Identified AI hallucination failures in production testing and implemented a policy verified against live tool failures to report uncertainty instead of guessing.
- Implemented human-in-the-loop escalation logic routing AI-generated verdicts to automated email alerts for Suspicious/Malicious findings while auto-closing benign alerts.

ICS Modbus Attack & Detection Lab

Personal Project

- Engineered a Modbus/TCP man-in-the-middle proxy and passive IDS in Python to demonstrate real-time telemetry spoofing and unauthorized command injection against a simulated PLC.
- Diagnosed and resolved distributed-systems failures, including silent connection loss, and log buffering, while containerizing and network-segmenting the lab across isolated Docker services.
- Mapped attack behaviors to MITRE ATT&CK for ICS techniques and documented reproducible scenarios in a public GitHub repository.

CI/CD Security Pipeline

Personal Project

- Engineered a 4-stage GitHub Actions security pipeline integrating Semgrep, Trivy, and TruffleHog to automatically catch vulnerable code and leaked credentials before merge.
- Tested the pipeline end-to-end by introducing a command-injection vulnerability and a CVE-flagged dependency, verifying that both were blocked and documenting the remediation through pull requests.
- Hardened the CI/CD software supply chain by pinning third-party GitHub Actions to verified commit SHAs and restricting workflow permissions to follow least-privilege principles.

CERTIFICATIONS AND TRAINING

Google Cybersecurity Professional - Google (Issued Aug 2023)

Certified Defensive Security Analyst (CDSA) - HackTheBox [Completed Pathway]

Jr. Pentester & Web Fundamentals - TryHackMe [Completed Pathways]

ACTIVITIES

- CTF Participant (OWASP-TCET, IITB-CTF) - Web, OSINT, Crypto, Privilege Escalation
- Industry exposure to networking, IDS, and digital forensics tools.
