SUMMARY

I am a Cybersecurity grad student, holding a 4.0 GPA, and I build things instead of talking to keep myself sharp and current. I'm deep into automation, writing Python scripts, using Docker, and setting up pipelines so I don't have to do manual work. I'm currently looking for my first full-time cybersecurity role where I can contribute, learn from an experienced team, and keep building my skills.

EDUCATION

Master of Science in Cybersecurity
University of Houston- Houston, Texas
GPA: 4.0/4.0

Expected May 2027

Bachelor of Technology in Cybersecurity
Shah & Anchor Kutchhi Engineering College - Mumbai, India
GPA: 8.2/10

June 2025

TECHNICAL SKILLS

Security Operations: SIEM Monitoring, alert triage, phishing analysis, incident response

Network Analysis: Packet inspection, traffic analysis, Security Onion

OT/ICS Protocols: Modbus/TCP, PLC Address Mapping, IPv4/IPv6 Subnetting

Tools: Nmap, Burp Suite, Metasploit, Wireshark

Automation/Programming: Python, Bash, Docker, n8n

WORK EXPERIENCE

Red Team Analyst Intern

June 2024 - December 2024

DeepCytes Ventures Pvt. Ltd., Mumbai, India

- Wrote Python automation scripts for CLI security tools, integrating them into the company's core SaaS platform to increase vulnerability scanning throughput.
- Executed controlled vulnerability assessments focused on NoSQL, command, and LDAP injection within isolated test environments.
- Created detailed reports for the tools I worked with, including screenshots, scripts, tool usage, findings, and supporting documentation.

Technical Support Engineer Intern

December 2023 - January 2024

Network TechLab Pvt. Ltd., Mumbai, India

- Monitored 20+ daily alerts coming out of the AtmosSecure SIEM dashboard across multiple enterprise clients.
- Downloaded and cleaned up log data into custom Excel sheets based on client needs, routing incident reports directly to the right SOC leads within SLA windows.

Research Intern

January 2023 - April 2023

Shah and Anchor Kutchhi Engineering College, Mumbai, India

- Researched Tor networks over a 4-month span to track down illicit marketplaces and wrote detailed reports mapping out deep web ecosystems.

TECHNICAL PROJECTS

Automated AI SOC Agent

Summer 2026

- Built an autonomous agent that handles alert investigations from start to finish without anyone touching it.
- Hooked Wazuh up to generate alerts, used n8n to run the workflow, and pulled VirusTotal to check the files.
- Added a safety check so the AI just says "I don't know" instead of hallucinating answers, plus a human-in-the-loop email alert for sketchy findings while auto-closing benign alerts.

ICS Modbus Attack & Detection Lab

Summer 2026

- Built a Python proxy and IDS to intercept and modify Modbus/TCP traffic and inject commands into a simulated PLC.
- Containerized the lab across isolated Docker services, diagnosing real distributed-systems issues like silent connection loss and log buffering along the way.
- Also mapped the attack scenario to MITRE ATT&CK for ICS.

CI/CD Security Pipeline

Summer 2026

- Configured a 4-stage GitHub Actions security pipeline with Semgrep, Trivy, and TruffleHog to catch vulnerable code and leaked credentials before merge.
- Tested the pipeline end-to-end by introducing a command-injection vulnerability and a CVE-flagged dependency, confirming both were blocked and documenting the fix through pull requests.
- Generated automated SBOMs, pinned third-party actions to verified commit SHAs, and restricted workflow permissions to lock down the supply chain.

CERTIFICATIONS AND TRAINING

Google Cybersecurity Professional - Google (Issued Aug 2023)

Certified Defensive Security Analyst (CDSA) - HackTheBox [Completed Pathway]

Jr. Pentester & Web Fundamentals - TryHackMe [Completed Pathways]

ACTIVITIES

- CTF Participant (OWASP-TCET, IITB-CTF) - Web, OSINT, Crypto, Privilege Escalation
