SUMMARY

I'm a Cybersecurity master's student at the University of Houston, looking to start my career in cybersecurity, with a focus on blue teaming or SOC analysis. I've triaged alerts in my internship, run injection tests in isolated environments, and built a Wazuh-based agent that investigates alerts and escalates to a human when it isn't sure. I'm open to internships or full-time roles, and I want to learn from an experienced team. Longer term, I'm interested in OT/ICS security.

EDUCATION

Master of Science in Cybersecurity Expected May 2027
University of Houston, Houston, Texas | GPA: 4.0/4.0

Bachelor of Technology in Cybersecurity June 2025
Shah & Anchor Kutchhi Engineering College, Mumbai, India | GPA: 8.2/10

TECHNICAL SKILLS

Security Operations: SIEM monitoring, alert triage, phishing analysis, incident response
Network Analysis: Wireshark, packet inspection, traffic analysis
Automation: Python, n8n, Docker
OT/ICS: Modbus/TCP, PLC address mapping
Cloud: AWS (basics)

TECHNICAL PROJECTS

AI SOC Analyst: Autonomous Alert Triage Pipeline Summer 2026
- Deployed a self-hosted Wazuh SIEM and built an n8n agent that investigates alerts end to end, using VirusTotal for file and IOC lookups.
- Found that the agent made up a verdict when a tool call failed. Fixed it so it reports the failure and escalates instead of guessing.
- Suspicious or malicious verdicts email a human for review, and benign alerts close automatically.

ICS Modbus Attack & Detection Lab Summer 2026
- Built a Python man-in-the-middle proxy that tampers with live PLC traffic, and a passive IDS that detects both attack types without duplicate alerts.
- Split the lab across isolated Docker containers to mirror OT network zoning and mapped the attack to MITRE ATT&CK for ICS.

CI/CD Security Pipeline Summer 2026
- Built a GitHub Actions pipeline that runs code scanning, dependency and secret checks, and SBOM generation on every pull request.
- Introduced a command-injection flaw and a CVE-flagged dependency on purpose and documented the pipeline blocking both.

WORK EXPERIENCE

Red Team Analyst (Cyber Intelligence Fellowship) June 2024 - December 2024
DeepCytes Ventures Pvt. Ltd., Mumbai, India
- Wrote and customized Python and Bash scripts for CLI security tools to fit the testing flow, using AI-assisted development.
- Ran controlled NoSQL, command, and LDAP injection tests in isolated test environments.
- Documented findings with tool output, screenshots, and impact, and presented them to my supervisor.

Technical Support Engineer Intern December 2023 - January 2024
Network TechLab Pvt. Ltd., Mumbai, India
- Reviewed 20+ alerts in the AtmosSecure SIEM across multiple client environments.
- Exported alert details into structured Excel reports based on each client's requirements and sent them to the client's defense team.
- Saw how the alerts map to MITRE ATT&CK and how incident response workflows run in a real SOC.

Research Intern January 2023 - April 2023
Shah & Anchor Kutchhi Engineering College, Mumbai, India
- Researched dark web sources using Tor and Tails OS, identified illicit websites, and wrote up findings with mitigation notes.

CERTIFICATIONS AND TRAINING

- Google Cybersecurity Professional, Google (Issued Aug 2023)
- HackTheBox, CDSA [Job-Role path, completed]
- TryHackMe, Jr. Pentester & Web Fundamentals, [Learning Paths, completed]

ACTIVITIES

- Cloudathon@UH (Cybersecurity domain): Honorable Mention. CTFs: AWS IAM, Route 53, VPC
- CTF Participant (OWASP-TCET, IITB-CTF): Web, OSINT, Crypto, Privilege Escalation
